Project Name	Streamlining IT Procurement: Automating Standard Laptop Orders with Flow Designer

Step-1: Team Gathering, Collaboration and Select the Problem Statement

Selected problem: Standard laptop requests require timely configuration, but manual task creation and assignment can cause delays, oversight and additional user waiting time.

Step-2: Brainstorm, Idea Listing and Grouping

Automation Ideas

- Create a Flow Designer flow for Standard Laptop requests.
- Automatically create a Catalog Task after approval.
- Automatically assign the Catalog Task to the Hardware group.
- Update the task short description and description with the configuration requirement.

Service Catalog & Approval Ideas

- Use the Standard Laptop Service Catalog item for placing the request.
- Trigger the workflow from the Service Catalog process.
- Process the request after the required approval is completed.

Usability & Efficiency Ideas

- Reduce manual intervention in procurement.
- Reduce user waiting time by starting configuration work promptly.
- Improve resource utilisation through automatic task allocation.

Step-3: Idea Prioritization

Prioritization criteria: Importance to reducing procurement delay and feasibility within the ServiceNow Flow Designer scenario.

Idea	Importance	Feasibility	Priority Rationale
Flow Designer automation	High	High	Directly automates the standard laptop workflow.
Automatic Catalog Task creation	High	High	Ensures configuration work is generated after approval.
Hardware assignment	High	High	Routes the task to the team responsible for configuration.
Approval-based processing	High	High	Ensures the workflow proceeds after approval.
Task description update	Medium	High	Makes the configuration requirement clear to the assigned team.

Idea	Importance	Feasibility	Priority Rationale
Status visibility	Medium	High	Helps users and teams follow the request and task progress.

Selected Concept:

Implement an automated ServiceNow Flow Designer workflow for Standard Laptop requests that, after approval, creates a Catalog Task, updates the configuration description and assigns the task to the Hardware group.
