Streamlining IT Procurement: Automating Standard Laptop Orders with Flow Designer

Date	02 October 2026
Team ID	SWTID-2026-5694
Team Size	4
Team Leader	Praveen Karthik R
Team Members	S Madhan Balaji SS SARANYA SRI VALLI D
Project Name	Streamlining IT Procurement: Automating Standard Laptop Orders with Flow Designer

User Persona: IT Procurement Team Member / Laptop Requester / Hardware Team

The empathy map is based on the standard laptop procurement scenario and focuses on the user's behaviours, attitudes, goals and challenges.

THINK & FEEL

- I want standard laptop requests to move through the process without unnecessary delay.
- I expect the laptop to be configured promptly after it arrives.
- I want fewer manual steps in the procurement process.
- I need confidence that approved requests are handled correctly.

HEAR

- Standard laptop requests need approval before processing.
- The Hardware team needs a task so the laptop can be configured.
- Manual procurement steps can delay fulfillment.

SEE

- A Standard Laptop item is available through the Service Catalog.
- Requests have a Requested Item and approval status.
- Flow Designer can automatically create a Catalog Task.
- The task can be assigned to the Hardware group.

SAY & DO

- I place a request for a Standard Laptop through the Service Catalog.
- I follow the request and approval status.
- I expect the Hardware team to receive the configuration task.
- I complete the required work after the laptop is configured.

PAIN

- Manual task creation can cause delays or oversight.
- Laptop configuration may be delayed after procurement.
- Users may wait longer when tasks are not automatically assigned.
- Manual intervention can create avoidable errors.

GAIN

- Automatic creation of a Catalog Task after approval.
- Automatic assignment of the task to Hardware.

- Timely laptop configuration and reduced waiting time.
- Better resource utilisation and improved procurement efficiency.

Empathy Insight:

The central user need is a timely and predictable standard laptop procurement process in which approved requests automatically reach the Hardware team for configuration with minimal manual intervention.
