Project Name	Streamlining IT Procurement: Automating Standard Laptop Orders with Flow Designer

Customer Problem Statement

The problem statement focuses on delays and manual overhead in standard laptop procurement. Standard laptop requests often require configuration, but the configuration step can be overlooked or delayed, increasing user waiting time and creating inefficient resource allocation.

Problem Statement Format: I am / I'm trying to / But / Because / Which makes me feel

Problem Statement	I am	I'm trying to	But	Because	Which makes me feel
PS-1	an IT procurement team member	process a standard laptop request efficiently	manual task creation and assignment may delay configuration	the process requires manual coordination after procurement	concerned about delays and avoidable overhead
PS-2	a standard laptop requester	receive a configured laptop promptly	configuration may not start immediately after the request	the process does not automatically generate and assign the required task	frustrated by unnecessary waiting
PS-3	a Hardware team member	receive configuration work at the right time	the configuration task may be overlooked or delayed	manual intervention is required to create and route the task	concerned about inefficient task allocation

Core Problem Statement:

The standard laptop procurement process needs an automated workflow that creates and assigns the configuration task after approval, so laptops can be configured promptly while reducing manual intervention, user waiting time and inefficient resource allocation.
