

Problem – Solution Fit Template

Project: Streamlining IT Procurement: Automating Standard Laptop Orders with Flow Designer

Date	02 October 2026
Team ID	SWTID-2026-5694
Project Name	Streamlining IT Procurement: Automating Standard Laptop Orders with Flow Designer
Team Leader	Praveen Karthik R
Team Members	Praveen Karthik R, S Madhan, Balaji SS, SARANYA SRI VALLI D
Platform	ServiceNow
Maximum Marks	2 Marks

Problem–Solution Fit

Canvas Area	Project Analysis
1. Customer Segment(s)	Employees/users requesting standard laptops and the IT procurement or hardware team handling configuration.
2. Jobs-to-be-Done / Problems	Submit a standard laptop request and ensure that a configuration task is created and routed after approval.
3. Triggers	Approval of a Standard Laptop Service Request.
4. Emotions: Before / After	Before: uncertainty about task creation and delays from manual handling. Intended after-state: clearer, more consistent task handoff.
5. Available Solutions	Manual task creation and assignment, or workflow automation using ServiceNow Flow Designer.
6. Customer Constraints	The workflow depends on the request being submitted and approved, and on the required catalog item and Hardware group being available.
7. Behaviour	Users submit a catalog request; procurement/hardware staff process the resulting task.
8. Channels of Behaviour	ServiceNow catalog, request records, Flow Designer and Catalog Task records.
9. Problem Root Cause	Manual handoff after approval can require additional effort and may be delayed or overlooked.
10. Your Solution	Use Flow Designer to create and configure a Catalog Task after the Service Request approval.

Problem–Solution Fit Summary

The proposed workflow connects an approved Standard Laptop request to a Catalog Task assigned to the Hardware group. It is intended to reduce manual task creation and make the configuration handoff more consistent.
