Project Name	Streamlining IT Procurement: Automating Standard Laptop Orders with Flow Designer

S.No.	Parameter	Description
1	Problem Statement	The current IT procurement process lacks efficiency and automation, causing delays and manual overhead in standard laptop orders. Configuration can be overlooked or delayed, increasing user waiting time and creating inefficient resource allocation.
2	Idea / Solution description	Implement an automated ServiceNow Flow Designer workflow for Standard Laptop procurement. After the service request is approved, the flow creates a Catalog Task, sets the configuration description and assigns the task to the Hardware group.
3	Novelty / Uniqueness	The solution connects the standard laptop request, approval and hardware configuration steps into an automated workflow, reducing the need for manual task creation and assignment.
4	Social Impact / Customer Satisfaction	Users can receive timely configuration of standard laptops with less waiting and fewer manual handoffs. The IT team can allocate configuration work more efficiently.
5	Business Model (Revenue Model)	This is primarily an internal IT process-automation solution rather than a standalone revenue product. Its value comes from reduced manual effort, improved productivity, faster fulfillment and better use of IT resources.
6	Scalability of the Solution	The Flow Designer approach can be extended to additional standard IT procurement items and similar approval-based fulfillment workflows, while maintaining automated task creation and assignment.

Project Workflow Summary

Standard Laptop Service Catalog → Order Now → Request / Requested Item → Approval → Flow Designer → Create Catalog Task → Short Description / Description: Laptop need to be Configured → Assignment Group: Hardware → Hardware configuration → Completion.

Conclusion

By automating the standard laptop procurement process with ServiceNow Flow Designer, the project addresses inefficiencies and reduces manual overhead. The workflow supports timely configuration, minimises user wait times, improves resource allocation and provides a more seamless procurement process.
