

Solution Architecture

Project: Streamlining IT Procurement: Automating Standard Laptop Orders with Flow Designer

Date	02 October 2026
Team ID	SWTID-2026-5694
Project Name	Streamlining IT Procurement: Automating Standard Laptop Orders with Flow Designer
Team Leader	Praveen Karthik R
Team Members	Praveen Karthik R, S Madhan, Balaji SS, SARANYA SRI VALLI D
Platform	ServiceNow
Maximum Marks	As per reference template

1. Architecture Overview

The solution is implemented on the ServiceNow platform. Flow Designer responds to the Service Catalog trigger and runs the Create Catalog Task action using the requested item record.

2. Logical Architecture

Component	Responsibility
Requester	Submits the Standard Laptop catalog request.
Service Catalog / Request	Holds the submitted request and approval state.
Approval process	Determines whether the Service Request is approved.
Flow Designer	Runs the configured workflow after the relevant catalog trigger.
Create Catalog Task action	Creates the task using the Requested Item record.
Catalog Task	Stores the configuration task and its assignment details.
Hardware group	Receives the task for laptop configuration.

3. Workflow Sequence

- User submits the Standard Laptop catalog request.
- The request proceeds through its approval process.
- After approval, the Service Catalog trigger starts the configured flow.
- The flow executes the Create Catalog Task action.
- The Requested Item record is mapped to the Request item field; the table is populated as Catalog Task.
- The action sets short description and description to "Laptop need to Configured" and assignment group to Hardware.

4. Data / Field Mapping

Source / Input	Target field	Configured value
Requested Item record	Request item	Requested Item Record data pill
Create Catalog Task action	Table	Catalog Task (auto-populated)
Configured text	Short description	Laptop need to Configured
Configured text	Description	Laptop need to Configured
Assignment group	Assignment group	Hardware

5. Platform and Dependencies

Platform: ServiceNow. Automation: Flow Designer. Action: Create Catalog Task. Trigger: Service Catalog. Dependency: Standard Laptop catalog item, approval process, and Hardware assignment group must exist and be configured in the instance.

6. Architecture Limitations

The supplied instructions do not specify external APIs, integrations, custom tables, notification rules, or purchase-order automation. These are not represented as implemented components.
