

Performance & Implementation Test

Project: Streamlining IT Procurement: Automating Standard Laptop Orders with Flow Designer

Date	02 October 2026
Team ID	SWTID-2026-5694
Project Name	Streamlining IT Procurement: Automating Standard Laptop Orders with Flow Designer
Team Leader	Praveen Karthik R
Team Members	Praveen Karthik R, S Madhan, Balaji SS, SARANYA SRI VALLI D
Platform	ServiceNow
Maximum Marks	10 Marks

1. Solution Summary

ServiceNow Flow Designer flow “Standard laptop task” uses a Service Catalog trigger and Create Catalog Task action to create a configuration task after approval. The task is mapped to the Requested Item record and assigned to Hardware.

2. Functional Validation

S.No.	Parameter	Values / Project Result	Evidence
1	Solution Summary	Flow Designer workflow for approved Standard Laptop requests.	Insert flow configuration screenshot
2	Task Creation Validation	Expected: Catalog Task created after approval. Actual result not provided.	Insert execution/task screenshot
3	Field Mapping Validation	Expected short description and description: Laptop need to Configured.	Insert task form screenshot
4	Assignment Validation	Expected assignment group: Hardware.	Insert task form screenshot

3. Performance Validation

Measure flow execution duration and task creation latency in the ServiceNow instance. No measured values were supplied. Record test environment, number of runs, observed values and any errors before making performance claims.

4. Optimization

If execution issues are observed, review trigger conditions, action inputs and unnecessary flow steps. Apply changes only when supported by observed behavior, then rerun functional tests.

5. Not Applicable

Training accuracy, validation accuracy, classification confidence, confusion matrix and hyperparameter tuning are machine-learning metrics and are not applicable to this Flow Designer automation project.

6. Release Readiness

Consider the workflow ready for release only after the configured flow is executed successfully in the target instance, expected task fields are verified, and required approvals/sign-off are recorded.
