Project: Streamlining IT Procurement: Automating Standard Laptop Orders with Flow Designer

Date	02 October 2026
Team ID	SWTID-2026-5694
Project Name	Streamlining IT Procurement: Automating Standard Laptop Orders with Flow Designer
Team Leader	Praveen Karthik R
Team Members	Praveen Karthik R, S Madhan, Balaji SS, SARANYA SRI VALLI D
Platform	ServiceNow
Maximum Marks	As per reference template

1. Introduction

This document describes the functional and technical behavior of the ServiceNow workflow that automates Catalog Task creation for approved Standard Laptop requests.

2. Project Overview

2.1 Purpose

- Automate the post-approval creation and assignment of a laptop configuration task.

2.2 Key Features

- A user submits a Standard Laptop catalog request. After the Service Request is approved, the Flow Designer workflow creates a Catalog Task. The task uses the Request Item record, has the short description "Laptop need to Configured", has the description "Laptop need to Configured", and is assigned to the Hardware group.

3. Architecture

3.1 Platform Architecture

- ServiceNow provides the Service Catalog, request/approval records, Flow Designer and Catalog Task records.

3.2 Functional Flow

- A user submits a Standard Laptop catalog request. After the Service Request is approved, the Flow Designer workflow creates a Catalog Task. The task uses the Request Item record, has the short description "Laptop need to Configured", has the description "Laptop need to Configured", and is assigned to the Hardware group.

3.3 Data Mapping

Field	Expected value / mapping
Request item	Requested Item Record
Table	Catalog Task (auto-populated)
Short description	Laptop need to Configured
Description	Laptop need to Configured
Assignment group	Hardware

4. Setup Instructions

4.1 Prerequisites

- Access to a ServiceNow instance with permission to configure Flow Designer; Standard Laptop catalog item; Service Catalog trigger; approval process; Hardware group.

4.2 Configuration Steps

- 1. Open ServiceNow and navigate to All > Flow Designer.
- 2. Select New and choose Flow.
- 3. Set the flow name to "Standard laptop task".
- 4. Set Application to Global and Run as to System user, as specified in the project instructions.
- 5. Add a Service Catalog trigger and save it.
- 6. Add the Create Catalog Task action.
- 7. Map the Requested Item Record to Request item. Confirm the table is Catalog Task.
- 8. Set Short description and Description to "Laptop need to Configured".
- 9. Set Assignment group to Hardware.
- 10. Save and validate the flow using an approved test request.

5. Validation Requirements

Verify that the flow runs for the intended approved request and creates a Catalog Task with the specified field values and assignment. Record actual results and screenshots only after testing.
